Good read, but the author has no clue regarding physicsVon VergussenAll three parts of dire earth cycle are fast-paced with believable characters, a compelling story and generally good entertainment for sci-fi fans. You might then wonder why I gave only three stars? Because the author has no clue about the sci part in sci-fi. You have to ignore simple well known facts or better yet you should never have had physics in school (and I'm not talking about fast than light here):- In the first part the elevator goes straight up from australia. Thats impossible because of the rotation of earth. Hough corrected that in the later parts. Apparently somebody told him.- The author has apparently seen some footage of space shuttle or ISS - and seen that everybody on board is weightless. Its true, but only because ISS and space shuttle travel fast and circumvent earth about 16 times a day. A space elevator can't do that (obviously), so it makes no sense that people get off the space elevator in 300 km height and are weightless.- A small thing: Things that fall down from the space elevator will not hit the bottom of the elevator but will fall ahead.Especially the zero-g part is annoying if you know how that works in reality. So be prepared to ignore better sense.0 von 0 Kunden fanden die folgende Rezension hilfreich. Good read, good story, weak scienceVon AndriI was gripped by the story and the characters that the author has scattered throughout the plotscape and is slowly pulling together (or kills offhand, another good trait in an author). The way the stations and ships keep floating around in space though.. and the haphazard localization an description of the elevator itself, and the supercapacitors that are never used creatively, combined with the never-questioned seeming immunity from famine of the infected (Zombies! call them Zombies!) must cost this book its fifth star, in my eyes.

KurzbeschreibungNEW YORK TIMES BESTSELLERJason M. Houghs pulse-pounding debut combines the drama, swagger, and vivid characters of Joss Whedons Firefly with the talent of sci-fi author John Scalzi. In the mid-23rd century, Darwin, Australia, stands as the last human city on Earth. The world has succumbed to an alien plague, with most of the population transformed into mindless, savage creatures. The planets refugees flock to Darwin, where a space elevatorcreated by the architects of this apocalypse, the Buildersemits a plague-suppressing aura. Skyler Luiken has a rare immunity to the plague. Backed by an international crew of fellow immunes, he leads missions into the dangerous wasteland beyond the auras edge to find the resources Darwin needs to stave off collapse. But when the Elevator starts to malfunction, Skyler is tappedalong with the brilliant scientist, Dr. Tania Sharmato solve the mystery of the failing alien technology and save the ragged remnants of humanity.Praise for The Darwin Elevator A hell of a fun book.James S.
