Von Jules Verne : The Moon-Voyage (English Edition) before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Moon-Voyage (English Edition):

Kundenrezensionen Hilfreichste Kundenrezensionen 0 von 0 Kunden fanden die folgende Rezension hilfreich. The moon as the 51. U.S. state Von ({{}}) That is the goal of the Gun Club: This group of over-achievers wants to send a bullet to the moon and perhaps later conquer the earth's satellite. The men begin to calculate, as they are almost finished, a telegram comes to say they must make new plans. In the process, two arch enemies meet and befriend each

other with the help of a daring Frenchman. This book is a long read, but interesting and action-packed, except for a few long calculations. It also doesn't have X-Ray. Kids probably won't enjoy this book as much as the famous *Around the World in Eighty Days*, but it is worth while for anyone who is interested in the moon or what they thought it was like in the 19th century. If you liked this book, you might like *In the Year 2889*, a shorter book by the same author.

Von Querleser
Einzigster Nachteil: ist eben die Rechtschreibung des 19. Jahrhunderts. Aber das ist eben der Preis, den man für die null Euro Klassiker bezahlt. Spannendes Buch, Klasse wie die Sci-Fi des 19. Jh war. Jules Verne driftet zwar auch gerne in Klisches ab (die schiefwichtigen, zupackenden Amerikaner, die englischen Krmer etc.) aber egal. Cool, wie er sich damals eine Mondreise vorstellte. Unbedingt lesen.

Kurzbeschreibung Jules Verne (1828-1905) is one of the most recognizable names in Western literature, coming to be known as one of the Fathers of Science-Fiction. Although he studied to be a lawyer and held stock trading jobs, he quickly learned that he had a knack for weaving adventurous stories of travels and expeditions. It didn't hurt that one of his teachers may have been inventor Brutus de Villeroi, who created the first submarine for the U.S. Navy. Verne wrote about air travel and space travel 50 years before either was possible.

Synopsis Jules Gabriel Verne (1828-1905) was a French author who pioneered the science-fiction genre. He is best known for novels such as *Journey to the Centre of the Earth* (1864), *Twenty Thousand Leagues Under the Sea* (1870), and *Around the World in Eighty Days* (1873). Verne wrote about space, air and underwater travel before air travel and practical submarines were invented, and before practical means of space travel had been devised. He is the third most translated author in the world, according to Index Translationum. Some of his books have been made into films. Verne, along with Hugo Gernsback and H. G. Wells, is often popularly referred to as the "Father of Science Fiction". Amongst his other works are *From the Earth to the Moon* (1867), *Five Weeks in a Balloon* (1869), *The Fur Country; or, Seventy Degrees North Latitude* (1873), *The Blockade Runners* (1874), *The Field of Ice* (1875), *The Mysterious Island* (1875), *Facing the Flag* (1879), and *An Antarctic Mystery* (1899).
